# TRANSPIRE

The new **Transpire** is the latest introduction to Ryka's cross-training collection. The Transpire features a dual foam outsole/midsole system which allows for multi-directional movements necessary for a variety of cross-training exercises. The dual foam system provides impact protection and increased stabilization simultaneously. (1) Ryka's proprietary foam compound hugs the foot while providing comfort and better rebound characteristics. (2) The outsole grade 3D EVA provides a stable platform through the multi-directional flex vents. The low-profile (7 oz) 9mm heel to toe variance mimics natural foot movement (as if you were barefoot).

Weight: 7.0 oz.
